

Counterbalance Forklift License Marysville

Counterbalance Forklift License Marysville - Forklifts, when operated by fully trained workers, are a major advantage to companies. We provide a thorough training program covering all aspects of operating a powered lift device. Counterbalance forklift training provides forklift operators with the practical skill and knowledge needed to operate forklifts efficiently and safely. The program provides a combination of classroom theory, hands-on training and participant observation within a warehouse-type environment. Training could be customized and/or on site.

The course includes the fundamentals of powered lift trucks, like for instance regulations and rules, components, load centres and factors affecting stability. General operating procedures are taught, like for example startup, circle check, forward/reverse on level ground, shutdown, and operating around other individuals. Load handling subject matters comprise load pickup and placement, selection of loads, load security and integrity, loading and off-loading trailers. Participants would learn operational maintenance procedures, such as recharging and refueling. Safety concerns in the workplace will be talked about. Participants would know the environmental conditions affecting the performance of the lift truck and be able to identify potential hazards. Advanced training on propane handling could be incorporated.

Employees and their employers may face penalties if they do not operate according to industry and national standards. Workers operating a counterbalance forklift will have to be knowledgeable about the safe operation rules of their forklift. Training is suggested for anybody applying for a job which needs forklift operation.

Inside our small personalized classes, we offer both in-class theory and hands-on training. The options for personalized training would consist of refresher or entry level courses.

Entry-level Course Outline:

For anyone entering the workforce as an operator of a counterbalance forklift, this training course is for you. The successful student has to pass a series of written and practical exams to complete the program. Subject matter comprises: general operating procedures; basics of powered lift trucks; load handling; operational maintenance; basic regulations and rules, workplace safety.
